

Consulting Presentation

New Market Entry for EV company in SEA

xx 2026

Executive Summary

Malaysia is the strongest first-entry market for Intweet Go

MARKET OVERVIEW

Large 2W customer base of **704,712** in Malaysia

EV penetration remains low at **1.53%**

Urbanization and growing EV adoption support demand

Government EV incentives help reduce the upfront price barrier

INTWEET GO'S STRATEGIC ADVANTAGES

Affordable positioning at **~\$900**

Swappable LFP battery for greater convenience

~80 km range, suited for urban commuting

App connectivity for a smarter riding experience

Value segment positioning between basic and premium EVs

TARGET MARKETS & INSIGHTS

Malaysia: Best balance of growth potential, competitive intensity and ease of entry

Thailand: Highly competitive with strong Chinese brands and price pressure

Indonesia: Large market opportunity but higher entry complexity

INTWEET GO'S DIFFERENTIATION STRATEGY

Focus on affordable electric mobility with practical technology

Swappable battery creates an advantage for users

Target urban commuters and delivery fleets

Leverage existing motorcycle shops and service networks

RECOMMENDATION

Enter Malaysia through a **Local Distributor Partnership + Export from India.**

Faster market entry with lower initial investment

Access to local sales and service network

Validate demand, scale, and consider local assembly in the longer term

Malaysia offers the strongest combination of market opportunity, competitive whitespace and execution feasibility for Intweet Go.

Market Assessment

Malaysia is the best entry point for Intweet

Lowest Entry Risk

Mature EV infrastructure, stable government, and clear regulations make Malaysia the most predictable Southeast Asian market for a new entrant.

Fastest ROI

1.53% EV penetration vs. 0.5% in Indonesia — existing consumer demand is already proven and growing.

B2B Opportunity

Grab & FoodPanda are actively expanding delivery fleets — a 500+ unit Year 1 target is within reach through direct fleet partnerships.

Market Entry Drivers

Urban Scale

70% urbanization rate. The Kuala Lumpur metro alone holds 7.2 million potential daily commuters – a dense, captive audience for affordable electric mobility.

Logistics Partnerships

Grab and FoodPanda require 500+ scooter units to fuel fleet expansion. B2B contracts reduce sales cycle uncertainty and accelerate volume.

Government Incentives

Current Malaysian EV policy offers RM 3,000–5,000 per unit in tax breaks, directly lowering the effective price barrier for consumers and fleet buyers.

Zero Import Tariffs

No tariffs on EV imports from India to Malaysia. Intweet's supply chain advantage translates directly to stronger margins from day one.

Why not Indonesia or Thailand?

Indonesia

- Higher market-entry complexity due to increasing local-content and local manufacturing requirements.
- Strong Chinese competition, especially from brands such as BYD and Wuling.
- EV market is growing fast, but infrastructure and adoption are still uneven across the country.
- Large market, but more difficult to scale efficiently.

Thailand

- Highly competitive EV market, with Chinese brands already dominating.
- EV adoption is already relatively high → less whitespace for a new entrant.
- Strong existing automotive manufacturing base means competition from established players is intense.
- Recent EV price wars have put pressure on margins.

Why Malaysia instead?

Malaysia offers a better balance of growth potential, lower competitive intensity and easier market entry.

PESTEL ANALYSIS

S- Large consumer base for 2 wheeler (34.4 million)

Large potential customers (70.4% working-age population)

Established motorcycle base (7.8 million active motorcycles)

T- Digitally connected (98.3% individual internet usage)

Battery-swapping ecosystem (low carbon)

EV charging expansion

E- GDP grew 6.0% in the second quarter of 2026

Private consumption +4.8% in the second quarter of 2026

Inflation ~1.9% in June 2026 (pp)

E- transport = 25–30% of national GHG emissions

70% renewable-energy capacity target by 2050

Battery/e-waste management

P- Government actively supports EV adoption

EV adoption targets

New Incentive Framework (NIF) (outcome based)

L- Motorcycle type approval required

Consumer Protection Act 1999 (quality, warranty, accurate claims)

E- Sustainable sourcing

Responsible battery disposal

Responsible business practices

Competitor Benchmarking

COMPETITOR ANALYSIS IN THE MALAYSIAN MARKET

Malaysia | Electric 2-Wheeler Market

Competitor benchmarking

Competitor	Price*	Range	Battery	Technology / USP	Target customer	Strength / weakness
Yadea	1125+ USD	105 km	Graphene	2 kW motor; broad range; established distributor	Mass-market / urban commuters	Strong value + portfolio; less premium tech differentiation
Blueshark	2835 USD	110 km	Dual battery	BlueSwap; smart scooter; connected ecosystem	Urban commuters / delivery	Strong swap ecosystem; higher upfront price
RydeEV	76-97/mo	70–100 km	Swappable	Battery-as-a-service; swap network	Urban / delivery / price-sensitive	Low entry cost; depends on swap infrastructure
NIU	Varies	77 km†	Li-ion	Smart app; connected powertrain; Bosch motor	Urban smart-mobility users	Strong tech brand; can sit above mass market
ZEEHO	1575+ USD	110 km	Li-ion	App, OTA, anti-theft, energy recovery	Tech-oriented urban riders	Good tech/value balance; newer local presence
EZI	965 USD	100 km	72V 32Ah	2 kW hub motor; practical commuter design	Daily urban commuters	Very affordable; smaller EV portfolio
QJ Motor E-LTR	1700+ USD	105 km	Li-ion	3 kW motor; 3 riding modes; CBS	Practical daily commuters	Established motorcycle distribution; limited EV range

EV Competitors in Malaysia

Key Takeaways & Strategic Implications-

→ Mass-market is crowded:

EZI, Yadea and QJ Motor offer low prices and practical features, so Intweet should not compete only on price.

→ Premium players are expensive:

Blueshark and NIU offer more smart features but at higher prices, creating an opportunity for an affordable tech-focused scooter.

→ Battery swapping can add value:

Blueshark and RydeEV use battery swapping to make charging easier. Intweet could explore a similar model or partner with an existing network.

→ Possible options for Intweet : Focus on affordable smart features, build local battery/charging partnerships, and offer strong after-sales service.

INTWEET — SWOT TAKEAWAYS

What the competitor landscape means for Intweet in Malaysia

S — STRENGTHS

- Multiple product lines allow flexible positioning
- 100% in-house manufacturing base
- Experience in a fast-growing Indian EV market
- Cost advantage can support value positioning

W — WEAKNESSES

- No established Malaysia/SEA brand presence
- Limited local partnerships and market knowledge
- Battery / charging ecosystem may need localisation
- After-sales network must be built

O — OPPORTUNITIES

- Growing EV adoption and supportive incentives
- Affordable quality scooters remain attractive
- Fleet / delivery partnerships can accelerate scale
- Tech + service can differentiate beyond price

T — THREATS

- Strong brands such as Yadea, NIU and Blueshark
- Price competition can pressure margins
- Battery-swap / charging infrastructure gaps
- Regulatory and product-homologation requirements

KEY TAKEAWAY - Compete on value + relevant smart features, while building local distribution/service capability.

We looked at key competitors across three shortlisted countries

Competitor Benchmarking – Intweet Go

Comparing key electric scooter (value segment) players in our shortlisted countries

1) MALAYSIA						2) THAILAND					3) INDONESIA				
Company	Average Price (USD)	Type of Battery	Range (km)	Top Speed (km/h)	Unique Features	Company	Average Price (USD)	Type of Battery	Range (km)	Unique Features	Company	Average Price (USD)	Type of Battery	Range (km)	Service Quality/ Warranty
Yadea E8S Pro	~\$1,600	LFP (Lithium Iron Phosphate)	100 – 110	60	Smart app, geo-fencing, anti-theft, digital instrument cluster	Gogoro 2 Plus	~\$1,700	Swappable (NMC)	110 – 120	Large battery swap network, smart app, over-the-air updates	Gesits G1	~\$1,300	Fixed (LFP)	60 – 70	3 years warranty, wide service network

RydeEV (MiKu Super)	~\$1,100	Swappable (LFP)	80 – 100	70	Swappable battery, robust for daily commercial use	Yamaha E01	~\$1,500	Fixed (LFP)	104	Yamaha quality, connected app, modern design	Polytron Fox-R	~\$1,200	Fixed (LFP)	70 – 90	2 years warranty, Polytrng service pontes
Intweet Go (Our Product)	\$900	Swappable (LFP)	80	45	Swappable battery, rugged frame, low cost, simple UI	Intweet Go (Our Product)	\$900	Swappable (LFP)	80	Swapable battery, rugged frame, low cost, simple UI	Intweet Go (Our Product)	\$900	Swappable (LFP)	80	2 years warranty (Planned), local partner network

Key Takeaway

- In all three markets, **Intweet Go is the most affordable option with a swappable battery** in the value segment.
- Malaysia shows the **strongest ecosystem for battery swapping**, making **Intweet Go** a strong fit for delivery/logistics riders.
- Thailand has premium competitors, but **Intweet Go's pricing** gives it an edge in the budget segment.
- Indonesia offers large volume potential where affordability and durability are key – **Intweet Go is well positioned**.

03

GTM Strategy

Go-to-Market: Partnerships & Team

Partnerships

Grab, FoodPanda, dealers, charging networks

Local Team

15–20 hires: sales, service, support

Service Network

Partner with existing motorcycle shops

Execution at Speed

Key Partnerships

- Grab & FoodPanda – anchor B2B fleet contracts
- 3–5 authorized dealers across KL metro
- Local charging network integrations

Local Team

- 15–20 hires covering sales, service, and customer support
- India remote team handles product and supply chain

Service Model

- Partner with existing motorcycle shops – faster and cheaper than building a proprietary service network from scratch

Mode Of Entry (Comparison Chart)

Intweet Go – Entry into Malaysia

Mode of Entry	Investment Requirement	Control Over Operations	Speed to Market	Risk Level	Pros	Cons	Suitability for Intweet Go
 1. Export from India (Direct)	Low	Low	★★★★ (Fastest)	Low	• Lowest investment • Quickest way to start sales	• Low control • Depends on import regulations & duties • Higher logistics cost per unit	★★★ (Moderate)
 2. Local Distributor Partnership	Low – Medium	Medium	★★★★ (Fast)	Medium	• Use existing distribution & service network • Lower investment • Faster market penetration • Local partner helps in compliance & market insights	• Lower margins • Brand control is shared • Partner performance risk	★★★★★ (Highly Suitable)
 3. Joint Venture (JV)	Medium – High	High	★★★ (Moderate)	Medium	• Shared investment & risk • Access to local expertise & networks • Easier handling of regulations	• Complex to structure • Profit sharing • Alignment challenges	★★★★ (Suitable)
 4. Local Assembly (CKD)	High	High	★★ (Slow)	Medium – High	• Lower import duties • Better pricing in long run • Builds local presence	• High initial investment • Requires local setup & approvals • Takes time to scale	★★★ (Moderate)
 5. Wholly Owned Subsidiary	Very High	Very High	★ (Slowest)	High	• Full control over operations • Protects brand & IP • Long-term strategic presence	• Very high investment • High operational risk • Long time to break even	★ (Low)

**RECOMMENDED
MODE OF ENTRY**

Local Distributor Partnership + Export from India

- ✓ Lowest initial investment with fastest market entry
- ✓ Leverage local partner's network for sales, service and regulatory compliance
- ✓ Test the market with Intweet Go and scale up to local assembly in the future

INTWEET GO – MALAYSIA MARKET ENTRY STRATEGY SUMMARY

After analysing the market, competitors and entry options, our recommended approach is to enter Malaysia **through a Local Distributor Partnership combined with Export from India.**

This approach offers the best balance of affordability, speed, control, and scalability—leveraging local expertise and networks while keeping initial investment low and risk manageable.

WHY MALAYSIA?

- **Strong Market Opportunity:** Large and growing EV market driven by urbanization, government incentives and rising EV adoption.
- **Ideal for Intweet Go:** Early-stage market for affordable electric scooters with a strong need for practical, cost-effective solutions.
- **Competitive Landscape Favors Us:** Competing on price and swappable battery technology gives us a unique advantage.
- **Supportive Ecosystem:** Government EV incentives, expanding charging and swapping infrastructure and a tech-savvy customer base.

OUR STRATEGIC ADVANTAGES

- **Affordable Positioning:** Intweet Go's low-cost electric scooter with a swappable LFP battery makes EV ownership accessible.
- **Product Fit:** ~80 km range and smart app connectivity are ideal for daily urban commuting.
- **Differentiated Value:** Swappable battery technology ensures convenience, uptime and lower total cost of ownership.

TARGET MARKETS INSIGHTS

- Malaysia offers the best balance of growth potential, competitive intensity and ease of entry.
- Thailand has strong competitors and price pressure.
- Indonesia has high volume potential but greater entry complexity.

RECOMMENDED MARKET ENTRY

- Enter through a Local Distributor Partnership and Export from India.
- Fastest market entry with the lowest initial investment.
- Leverage the partner's local network for sales, service, compliance and market insights.
- Test the market, build brand awareness and scale up to local assembly in the future.

KEY TAKEAWAY

Intweet Go is well-positioned to succeed in Malaysia by offering an affordable, reliable and innovative electric scooter. Our recommended entry strategy minimizes risk, maximizes speed to market and creates a strong foundation for long-term growth. This approach allows us to enter smart, learn fast and scale sustainably.

Malaysia is the strongest first-entry market for Intweet Go. Let's enter smart, deliver value and lead the affordable EV revolution.

Thank You!
